

SAVING TIPS

FOR YOU AND YOUR ENVIRONMENT

Airing

Regular airing instead of permanent window tilting. During airing switch off the thermostat.

Clever Heating

With just one degree less room temperature you can save up to 6% save on heating costs.

Smart Heating

An electronic thermostat can control heating times and detect ventilation times. So you have it in your own hands, the costs at a glance.

Temperature

A room temperature of 20°C (level 3) is recommended and 16°C - 17°C (level 2) at night or when you are not at home.

Heating Performance

Furniture and curtains do not belong in front of the radiator. This allows optimal circulation to air and achieving better heating performance.

Close Doors

If the doors between the rooms remain closed, this could save up to 5% on heating costs.

Use Cold water

Soap removes dirt even without hot water. Therefore, for washing hands cold water could also be used.

Shower Shorter

If you reduce shower time to a maximum of 5 minutes and lower water temperature, you can save not only hot water but also energy.
